Beyond Force-Fit “Solutions.”

Nelson has developed the industry’s broadest line of Heat Trace cables, controls, monitors and accessories for one very simple reason:

It’s the only way to give you the right solution for every application, instead of force fitting from a limited product line. To make things even easier and more precise, you can use **Renegade** Heat Trace Selection Software to objectively compare alternatives from all the major suppliers.

In the end you’ll have application-driven (not product-mandated) systems to deliver the most efficient, trouble-free and cost-effective Heat Trace solutions. While delivering products to best meet customer needs seems like common sense, it’s revolutionary to most of the Heat Trace industry. In fact, force-fit “solutions” are so common, they’ve become business as usual. That’s not good enough for **Nelson**. So we continually research and develop new solutions, while refining our time-tested performers. Just as we’ve done for over 40 years. You can rest assured that every **Nelson** system is the best solution for your individual application. It’s the corporate pledge that guides our every step in the design, installation and operation of your Heat Trace systems. After all, your good name is riding on our performance.
